

# Standard Mouse Pad Sizes

## Hard Surface & Dye Sublimation Pads

**Small Pad:** 19 cm x 20.3 cm with 1.3 mm corner radius.

All pad sizes come in 6 mm, 3 mm and 1.5 mm thicknesses.

These are our two standard pad sizes for both dye sublimation (soft surface) and hard surface mouse pads. Other pad sizes and shapes are available on special order. Please call for further information.

As you might expect, larger thicker pads cost more than smaller thinner pads. Both type pads can be printed with gradients (blends) using either spot color or four color process (photographic quality), with or without a *full bleed* (printing all the way to the edge).

Full bleed printing requires the *image size* to be 6 mm bigger than the *pad size* on each side. This adds 12 mm to each dimension (length and width). Therefore, the *image size* for a *Small* pad (19 cm x 20.3 cm) should be 20.2 cm x 21.6 cm and for a *Large* pad (20.3 cm x 24.1 cm) should be 21.6 cm x 25.4 cm.

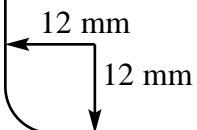

This extra “bleed area” will not be printed on the pad. Do not put anything in this area that you want to have printed. The same warning also applies to the rounded corner areas.

Whether you are using a full bleed or not, your pads will look better if you do not place any part of your image, except the background, closer than 6 mm from the edge of the pad and 12 mm looks better. ***Image size is always at least 12 mm larger than the pad size and the print area is always at least 12 mm smaller than the pad size.***

**Important:** Make sure your artwork has the right proportions (aspect ratio) to fit the pad size you select.

Corner Radius

We also have a 19.7 cm x 23.5 cm with a 2.5 cm corner radius pad—the same size as our silk screened pads. This pad costs the same as the *large* pad shown below.

Corner Radius

**Large Pad:** 20.3 cm x 24.1 cm with 1.3 cm corner radius.
